Re: Bowlin Camps LLC

5-13-00

Dear Mr. Stross.

I have reviewed the HHE-200 Form completed on 12-28-97 for Bowlin Camps in T5R8. The size design and location of disposal field meets present code (6-1-99). The septic tank will have to be of monolithic construction or tested for water tightness in the presence of the local Plumbing Inspector. Local Plumbing Inspector should verify E.R.P. location.

If E.R.P. is missing, a site visit will be required to establish new one.

If you have any questions, or need further assistance, please give me a call 794-8627.

Sincerely,

John Whitney

SUBJECT:

Approval, First Time System Variance Request, Bowlin Camps, T5 R8

Dear Mr. Stroff:

The Division has reviewed a first time system variance request and septic system design for the subject property. You are requesting approval to operate 5 cabins with a total of 20 single beds (4 beds/cabin). The state variance required is to allow a reduction in design flow from 50 gallons per bed to 25 gallons per bed due to the seasonal nature of the camp and no food preparation in the camps. The system design prepared by John Whitney, SE, dated 12-28-97 revised 5-22-00, is found to be in compliance with the Maine Subsurface Wastewater Disposal Rules.

We approve the requested variance with the following requirements:

- A permit for the installation of the system is to be obtained from the Local Plumbing Inspector in advance of the start of construction.
- The system must be installed in accordance with the submitted and approved system design.
 Should alterations to the design be required at the time of construction, the system designer must be notified before making any changes.
- 3. The variance approval is based only on the rules administered by this department. The approval does not relieve the property owner from compliance with all other state and local requirements for permitting, installing or utilizing the septic system.

By accepting this approval and the associated plumbing permit, the owner agrees to comply fully with the conditions of approval and the Subsurface Wastewater Disposal Rules.

Because installation and owner maintenance has a significant effect on the working order of onsite sewage disposal systems, including their components, the Division makes no representation or guarantee as to the efficiency and/or operation of the system, nor the water quality of the well.

We will notify the Eating & Lodging Program of our acceptance of the system design. You may contact them at 287-5671 for further information regarding requirements for obtaining an operating license.

Should you or others have any questions regarding the review and/or approval of the variance request, please feel free to contact me at 287-5687.

Sincerely. Linda S. Robinson

VARIANCE CONDITIONS

The Department has the authority to vary the requirements of the Rules in accordance with Section 105.2 of the Rules CMR 241 if all the following criteria are satisfied:

- a. The variance request has the approval of the LPI.
 b. The Municipal Officials have indicated that the variance does not conflict with any tocal wastewater disposal ordinances.
- a. The variance request demonstrates that there is no practical atternative for wastewater disposal, such as access to public sewer or the potential for
- d. The proposed system does not conflict with any provision controlling subsurface wastewater disposed in the Shoreland Zone.
 e. The effe offers potential for a system which will dispose of the wastewater with minimal threat to public health, safety, or welfare.
- f. The property owner has indicated an awareness of the variance and any limitations or added costs the proposed system may require.
